WHY IS GLOBAL ZONE SIGNIFICANT?

GLOBAL ZONE

The platform will facilitate traffic growth by serving both regional and international partners with the aim of creating a global data exchange that will act as a regional gateway to other parts of the world. This new concept will offer connectivity by serving as the regional carrier-neutral data transit-and-hub for the ever-growing data movement demands and allow service providers to meet in a robust ecosystem.

DATA CENTERS

The digital platform of tomorrow, a Carrier Neutral Tier 3 Data Center Certified by uptime.

CONNECTIVITY

Connecting your business to the region and beyond with low latency.

COLOCATION

Two locations that are the only Tier III design and build datacenter in the Kingdom of Bahrain, featuring highest security and controlled environments. Connect to MANAMA-IX directly via cross-connect between your equipment and our patch panel in approximately one week.

BENEFITS

Carrier Neutral DataCenter.

Retain 100% ownership of telecom equipment within the Zone.

Extend your services within the Zone to global entities hosted in there.

Various business models with revenue share options.

Bahrain's New Data Protection Law (PDPL).

Improved latency to reaching AWS Direct Connect PoP through single cross connect.
